ACRC Program

ACRC is a not-for-profit trade association representing the agricultural chemicals industry. Founded in February 1992, ACRC funds, operates, and promotes a nationwide producer-responsibility program for the collection and recycling of triple- or pressure-rinsed, empty, one-way rigid HDPE plastic containers (up to 55 gallons) — including crop protection, animal health, specialty pest control, micronutrient, biologicals, fertilizer, and adjuvant/surfactant containers. With over 70 Regular (manufacturers and formulators of agricultural products) and Affiliate (manufacturers of HDPE plastic containers or container components) Members, the program is entirely funded through member dues — a true producer-responsibility model that has operated successfully for over three decades.

Vermont Program

In Vermont, ***RPM eco*** serves as ACRC's designated contractor, collecting containers from retailers, applicators, and farmers throughout the state as part of ACRC's nationwide network. ACRC has collected and recycled more than 122,000 pounds of agricultural chemical container plastic in Vermont, including more than 30,000 pounds collected since 2016 alone.

Stewardship Plan

Core Principles	*ACRC's Existing Practices*
Producer-funded statewide program	ACRC has operated a fully member-funded, statewide Vermont collection program continuously since 1993 — at no cost to the state or Vermont taxpayers.
Convenient, optimal statewide collection coverage	RPM eco covers all of Vermont, including seasonal collection events and drop-off sites at agricultural retailers, professional applicators (ground and aerial), farms, and other sites established by RPM eco; part of 2,500+ sites nationally; No collection fee to growers or commercial applicators in most cases.
Reduce environmental and human health impacts through waste reduction, reuse, recycling	Mandatory triple-/pressure-rinse protocol (ANSI/ASABE S596, developed with ACRC's involvement) achieves 99.99%[1] active-ingredient removal before containers are chipped and recycled. Reuse-first practices are an option for larger containers designed as returnable/refillable under EPA regulations.
Responsible end markets	Collected containers are triple rinsed, chipped, and then recycled into approved productive end uses, such as agricultural drainpipe, landscape edging, nursery pots, industrial pallets, and other durable products, all rigorously vetted by the ACRC Technical Committee.
Public education, outreach and communication	Bilingual (English/Spanish) triple-rinsing videos, free brochures, posters, and checklists; multilingual “Clean Means Clean” visual aids; presentations to universities, extension agencies, ag chemical trade associations, and aerial applicators; and promotion at major agricultural events.
Measurable performance and annual reporting	Annual member sales surveys are compared against pounds collected; Vermont program tonnage has been tracked continuously since 1993.

Continuous Growth

- Encouraging and educating growers and applicators to recycle containers with ACRC contractors
- Identifying additional Vermont locations that could serve as ACRC collection sites
- Strengthening outreach partnerships with agricultural agencies, extension services, retailers, and applicator associations
- Connecting manufacturers of approved HDPE end-use products with ACRC program contractors
